

LOGIBALL 2001 J MAINLINE PACKERS

8" Span !

Complies with ASTM F 2304-03

The 2001 series are fully compatible for acrylamide, acrylate and urethane gels. The design makes it easier to test & seal leaks with optimal control throughout the operation while reducing operational costs.

Maintenance and spare parts are kept to a minimum to ensure that time is spent in the field and not in the shop.

**THE ONLY PACKER
ON THE MARKET
WITH 3 PORTS !**

Features & Benefits:

All stainless steel

3/8" thick reinforced rubber sleeve

Soft rubber seals for superior bladder seating on rough surfaces

Two grout ports, one inflation port & one dedicated test port (No "H" block required)

Dedicated liquid filled void pressure sensor line for transducer or pressure gauge at the packer

Adjustable independent non-dripping rubber check-valves on the packer

8" span makes it easier to line up on the joint (no overpulling)

"Autotesting" of joints simply by inflating the packer (increased productivity)

Only 26" long with skids

Operates with existing Test & Seal systems

Minimal residual grout ring

Design tested with over 175,0000 inflation cycles

Minimal maintenance required
